

Momentum SX loudspeakers

The new Momentum SX series represents another significant step forward in Neat's loudspeaker performance.

The thought processes behind the changes were quite similar to those for the Motive SX series.

The new SXT-A1 anodised aluminium tweeter developed for the Motive SX is easily capable of the performance necessary for a Momentum class loudspeaker. One of the reasons for the SXT-A1 outperforming all others was the huge magnet structure that allows it to deliver dynamics that most tweeters struggle with

The point to point hard-wired crossovers are low-order, utilising Mundorf M-Cap Supreme capacitors, M-Resist resistors and predominantly Mundorf air-cored inductors.

The result of these revisions is a range of loudspeakers with incomparable dynamics and insight, yet easy on the ear as well as the eye.

All models deliver the excitement of a music performance with a refined quality that is equally at home with the Allegri Quartet as Rage Against the Machine.

Momentum SX7i

Neat Momentums are visually deceptive designs, including more drive units than originally perceived. The Momentum SX3i features an isobaric loaded mid/bass unit enabling it to deliver a low-end performance well in excess of its modest appearance. The SX5i employs isobarically loaded sub-bass units mounted into the bottom of the cabinet and firing downwards.

Momentum SX3i

Momentum SX5i

The new Momentum SX7i uses dual isobarically loaded Bass/Mid sections to reduce excursion and hence lower distortion and increase dynamic headroom. It is supplied with a heavyweight solid slate plinth as standard.

The revised Momentum 4i, the SX5i, is also available with an optional slate base that adds stability, lowers the centre of gravity and ensures the sub-bass section fires into a consistent acoustic. The slate plinths can be retro-fitted to the Momentum 4i.

Finishes: American Natural Oak; American Walnut; Satin White; Black Oak
